

Aniket Chaudhry
Expected Graduation: Spring 2027

EDUCATION

Northeastern University

Boston, MA

Khoury College of Computer Science

September 2023 - Present

Candidate for Bachelor of Science in Computer Science, Concentration: AI

GPA: 3.92/4.0

Honors: CyberCorps Scholarship For Service, Khoury College Dean's List, Google Play Change The Game Winner

Relevant Coursework: Distributed Systems | Engineering LLM Integrated Systems | Foundations of Artificial Intelligence* | Object Oriented Design | Computer Systems | Database Design | Foundations of Cybersecurity

LEADERSHIP & WORK EXPERIENCE

Federal Bureau of Investigation, Washington, DC – Honors Intern

June 2026 - August 2026

- Optimized a Python-based automated information aggregation pipeline by improving database query logic and restructuring legacy components, reducing execution time by 30% and code complexity by 20%.
- Standardized telecommunications datasets by transforming 10,000+ unstructured records into normalized CSV schemas, eliminating several hours per week of manual triage across multiple analyst teams.
- Increased adoption of internal information-extraction tools by developing custom PyQt5 GUI interfaces for command-line utilities, enabling use by several non-technical squads across the agency.

Blue Origin, Denver, CO — Avionics Software Engineering Intern

January 2026 — April 2026

- Built and deployed observability infrastructure for a mission operations platform: 6 Grafana dashboards, 117 Prometheus alert rules, and an HA watchdog with on-call paging and self-telemetry.
- Defined and deployed Terraform infrastructure and CI/CD pipelines for AWS EC2 across multiple environments, enabling reproducible, environment-isolated observability deployments.
- Developed an autonomous engineering agent to automate ticket-to-code workflows, driving an estimated ~\$1.26M/year productivity gain across 10 engineering teams.
- Created a macOS menu bar app + CLI to dynamically switch AI coding assistant configs across 24 model backends, enabling fast A/B testing without manual setup.
- Implemented a natural language interface for a planning timeline tool via a backend query service and interactive chat UI for context-aware Q&A.
- Built a PagerDuty MCP server exposing 15 tools (incidents, on-call, escalation, etc.), with 45 unit tests and 99% coverage; designated code owner for the integration.

General Dynamics Electric Boat, Groton, CT - Tactical Software Engineering Co-Op

January 2025 — July 2025

- Created a YAML-configurable tracing service in Go, driven by gRPC protos that links 100% of OTEL-standard spans across a declared pipeline via per-hop FIFO queuing and HTTP exporting
- Added client-side proto-based batching for the tracing service, slashing gRPC traffic by 90% while delivering complete parent-child chains in Jaeger UI for real-time latency insights
- Implemented exhaustive test suite, achieving 100% coverage for critical Rust fault detection modules, testing all conditional paths and redundancy logic
- Adhered to system requirements, mission design documents (MDDs), and operational protocols while working within a security-controlled environment

Northeastern University Satellite Lab - Project Lead & Software Engineer

August 2023 — December 2025

- Led institutional collaboration with Amazon Web Services Ground Station to co-develop cloud-compatible satellite ground station software for streamlined communication with Northeastern University's planned TeraLink satellite mission
- Delivered quarterly updates to NASA/Air Force Research Laboratory on project status for partnered satellites
- Managed a team of 20+ students in developing 2 separate satellites to be deployed within 3 years

Sprouts.ai, San Francisco, CA - Full-Stack Software Engineer Intern

July 2024 – September 2024

- Collaborated on developing a content management solution using Strapi and JavaScript to optimize the webpage-building process for company executives
- Implemented a PostgreSQL schema hosted on Azure Database for PostgreSQL, scaling to handle an additional 5,000 daily queries with improved reliability

Space Dynamics Laboratory, Albuquerque, NM - Mission Concept Intern

May 2024 – July 2024

- Assembled a comprehensive mission design document (MDD) and requirements verification matrix (RVM) to advance Northeastern University's planned sub-Terahertz satellite communication experiment
- Supported system-level trade studies and documentation for space mission feasibility

* = Indicates graduate-level coursework
